The Aftermath of 4Q25 Results – What to Carryover Towards 2026?

Following the release of 4Q25 results on Thursday (check here), higher-than-expected SG&A expenses triggered multiple investor interactions, with questions focusing on the sustainable run-rate of these costs going forward. Unsurprisingly, this uncertainty led to a negative stock price reaction on Friday (5), with shares down ~10% during the trading session. After the company's conference call and incorporating more comprehensive buy-side feedback, we now share our full takeaways from the 4Q25 aftermath. In this context, we reassess the key drivers behind the results, provide our updated view on current valuation, and explore some sensitivities regarding the potential impacts on earnings and perception going forward.

- What happened and a recap of the concern: The main point of discussion stems from higher nominal freight expenses observed in a quarter marked by declining volumes QoQ, despite pressured SG&A in both nominal terms and relative to revenues. At first glance, this dynamic raises questions about the sustainability of logistics costs and the potential for a structurally higher SG&A run rate going forward, particularly as volumes continue to grow into FY26.
- Our numbers and operational read-through: Replicating the same logistics cost per ton YoY from FY25 into FY26 would imply an increase of roughly 50 bps in SG&A as a percentage of revenues, as currently priced in by Bloomberg's estimates, but still 130 bps below the level reported in FY25. As we move into 2026, lower corn outflows from Vale do Araguaia, as the corn ethanol plant ramps up, and declining rail freight prices point to a less significant carryover impact of the reported SG&A/revenues dynamics seen in 4Q25. This supports a slightly better SG&A/revenues forecast compared to 2025. Overall, we anticipate upward SG&A revisions of 30 bps over revenues for 2026 in our current official estimates, based on a sensitivity analysis if we carry over the 4Q spillover impacts for 2026, which we consider a conservative scenario.
- Downside framing and valuation impact: In the worst-case scenario, we estimate that bearish investors could revise 3tentos' FY26 net income downward by ~BRL 100 million, which would leave the stock trading at a P/E 0.2x higher than pre-4Q25 earnings release levels, based on consensus expectations. More reasonable scenarios, in our view, suggest the stock should trade at very similar multiples, which we continue to see as attractive once the stock price adjusts for that in post-results trading sessions. On a qualitative analysis, we have gathered feedback indicating a higher perception of volatility in SG&A expenses going forward, but not necessarily heavier freight expenses themselves. In this case, we would note that this could have some marginal impact on the perception of multiples, at least until greater visibility and confidence in freight trends moving forward are rebuilt. All in all, we continue to position 3tentos as our top pick within the agribusiness space, as we understand that the investment thesis' growth prospects are more than enough to justify the already rebalanced valuation after the 4Q25 discussions. Ultimately, we believe that the 4Q results brought discussions that might remind some investors that the growth path ahead should have some volatility embedded in it, but in our view, it does not change the final conclusion regarding the investment thesis.

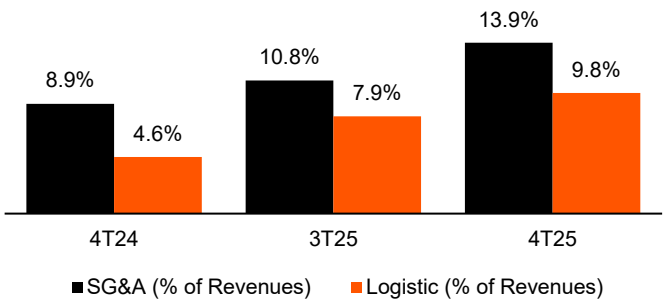
As a result, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should not consider this report as the sole factor in making their investment decision. **Itaú Corretora de Valores S.A. is the securities arm of Itaú Unibanco Group. Itaú BBA is a registered mark used by Itaú Corretora de Valores S.A.**

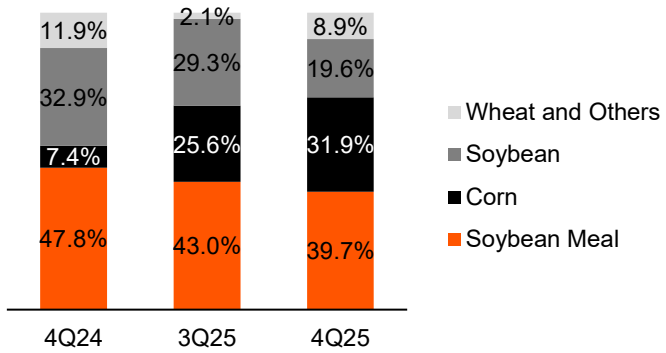
A quick recap of the main discussions in 4Q25. 3tentos reported soft 4Q25 results, with adjusted EBITDA (post-hedges) coming in 13% below our expectations, which had already been revised downward over the past few months in the Street's previews. The miss relative to our and consensus estimates was fully explained by higher-than-projected SG&A expenses, largely driven by logistics – a key topic during the company's ramp-up in Mato Grosso (MT) that has resurfaced. As a percentage of revenues, logistics expenses alone increased by 5.2 percentage points year-over-year in 4Q, rising to 9.8% from 4.6%. On a full-year basis, the quarter contributed negatively to the increase from 5.9% to 8.3% year-over-year. Both in the earnings release and during the conference call, part of this effect was attributed to a lower value-added mix, given the strong performance of corn and soybean meal, and a higher relevance of MT within 3tentos' ecosystem.

SG&A and Logistic Expenses as % of Revenues



Source: Itaú BBA and Company

Contribution from Grains and Soybean Meal (in Volumes)



Source: Itaú BBA and Company

More importantly, in our view, the analysis should focus on nominal logistics costs and sequential dynamics to strip out mix and volume effects. In nominal terms, logistics expenses rose 8.5% QoQ in 4Q25, or BRL 33 million, despite lower apparent volumes. Grain trading volumes declined from 1,004 ktons in 3Q to 779 ktons in 4Q25, while soybean meal volumes fell 32% QoQ. Although the exact contribution from Vale do Araguaia and other central regions was not provided, grain and soybean meal volumes in MT decreased by 37%, from 970 ktons to 607 ktons. According to the company, grain volumes were boosted by record soybean and corn harvests during 3Q25, while the top-line contribution of MT for the industry also declined from 9M25 to 12M25. In other words, available disclosures suggest a significant QoQ volume decrease in more remote regions (i.e., MT state compared to RS, excluding micro-region dynamics within these states) that was not expected to result in higher nominal freight costs. As a result, an unexpected increase in unit freight costs emerges as the core issue debated in our interactions with investors.

Breakdown of SG&A Expenses in Nominal Terms (in BRL mm) and Logistics Expenses per Volume (in BRL/ton)

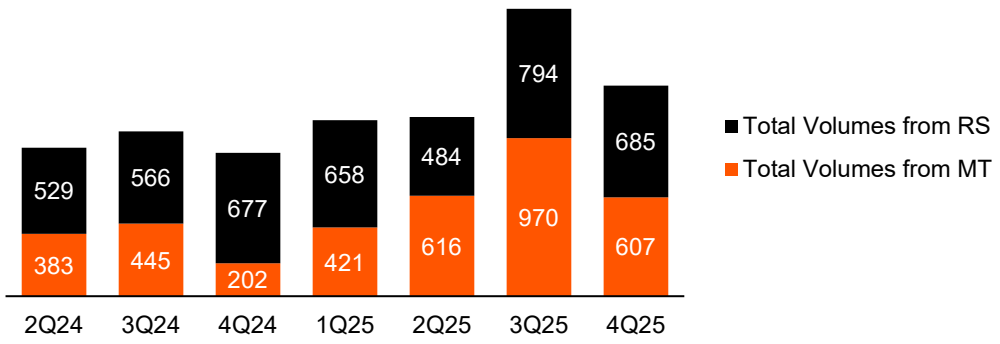
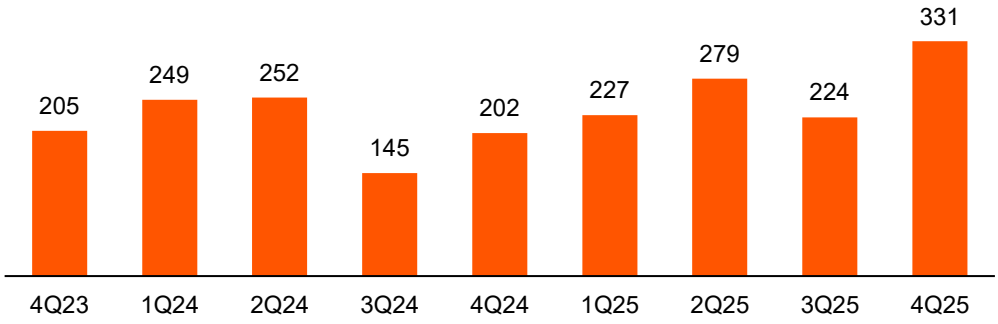
Breakdown of Grain and Soybean Meal Volumes per Region (in k tons)



Source: Itaú BBA and Company

Below, we present the historical evolution of nominal logistics expenses relative to soybean and corn trading volumes, as well as soybean meal volumes processed in the industrial segment. While a regional breakdown would be more informative – since a higher share of volumes originating in Vale do Araguaia within Mato Grosso would naturally imply higher freight costs per ton without necessarily raising red flags – the lack of more granular disclosure on this specific topic prevents a more quantitative conclusion. Looking ahead, 2026 is likely to bring several moving parts for volumes shipped, particularly corn, given the increasing local demand for crushing in MT. As a result, we expect the market to focus more heavily on nominal logistics cost per ton, rather than on logistics expenses as a percentage of revenues.

Logistic Expenses per Volume (Grains + Soybean Meal, in BRL/ton)



Source: Itaú BBA and Company

This shift in focus is, in our view, significant for the investment thesis and helps contextualize recent concerns about cost sustainability. Based on our estimates, and as shown in the chart below, simply replicating the same logistics expense-to-revenue ratio YoY in 2026 would mechanically imply an approximately 20% YoY increase in unit freight costs, an outcome that does not seem reasonable. In this context, we believe that de-emphasizing the revenue-based metric and reframing the discussion around nominal and unitary costs appears more appropriate, especially in a year with structurally different volume dynamics. This perspective supports the view that part of the recent pressure reflects transitional noise rather than a structurally higher logistics cost base.

Sensitivity for 2026e – Logistic Expenses per Volume of Soybean Meal and Grain Volumes

	As of FY24a												As of FY25a
SG&A Expenses as % of Revenues	9.4%	9.6%	9.8%	10.0%	10.2%	10.4%	10.6%	10.8%	11.0%	11.2%	11.4%	11.6%	11.8%

YoY Change to Unitary Logistic Expenses	-15.8%	-12.9%	-10.1%	-7.2%	-4.3%	-1.5%	1.4%	4.2%	7.1%	9.9%	12.8%	15.6%	18.5%

Source: Itaú BBA and Company

itaú BBA

We believe that investors are unlikely to fully replicate the same nominal logistics expenses per volume for FY26 as observed in FY25 on a YoY basis. This view is supported by the following main factors:

- First, the ramp-up of the corn ethanol plant in Porto Alegre do Norte should reduce the need to ship corn from the *Vale do Araguaia* via road transportation, which we see as the main freight cost offender in 4Q25. Still on this topic, and based on the company's FY26 guidance versus FY25 reported figures, trading volumes of corn should decline by nearly 25% YoY, mechanically increasing the relative contribution of higher value-added products when viewed as a percentage of revenues.
- Second, we expect lower railway freight costs YoY in FY26, in line with industry commentary and as highlighted by our IBBA Transportation Team (here), reducing costs in the modal option with lower prices that is gaining relevance in the mix. It is worth mentioning that in the railway freight discussion, there is a caveat, as some uncertainties arise given the volatile scenario related to oil prices and recent geopolitical tensions around the globe. On the flip side, since Iran is the largest destination for Brazilian corn exports (accounting for 22% of total volumes in FY25) a prolonged conflict could also translate into weaker export demand. Given the lack of visibility on these moving parts as of today, we believe it is too soon to perpetuate these variables into our 2026 forecasts.
- We would also flag a potential timing mismatch between sales volumes and freight expenses (i.e. a false impression of higher costs related to lower volumes), a point emphasized by the company during the conference call. That said, the magnitude of this effect – or whether it would be materially different from other quarters or years so as to justify the level of freight expenses recorded in 4Q25 – remains unclear.
- Finally, 4Q25 was not the only quarter with above-average nominal freight per ton, as 2Q25 also contributed to a heavier FY25 overall, implying easier comps ahead even from a higher-than-initially-expected starting point.

Starting from a per-ton cost perspective, we see a potential cap on SG&A expenses as a percentage of revenues. Importantly, this exercise is not meant to pinpoint an exact outcome but rather to frame a worst-case scenario and assess the sensitivity of potential revisions. Under this assumption, SG&A should not exceed 10.5% of revenues, compared to ~10% currently embedded in Bloomberg consensus and 10.2% in our FY26 model. In nominal terms, this implies a maximum additional SG&A burden of roughly BRL 130 million, according to our estimates. This framing helps contextualize downside risks without extrapolating FY25 dynamics into FY26. On a more constructive note, we believe 4Q25 could also trigger some upward operational revisions going forward: i) retail volumes were strong, partly reflecting slippage from FY25, with the top line already up 36% YoY in 2M26, as reported by the company; ii) crushing spreads (post-hedges) remained above market levels, supporting a beat in consolidated adjusted gross profit and signaling sequential improvement as we approach 1Q26; and iii) management reiterated that the start-up of corn ethanol operations in Porto Alegre do Norte remains on track for the coming weeks, reinforcing confidence in the operational outlook and de-risking more conservative investors.

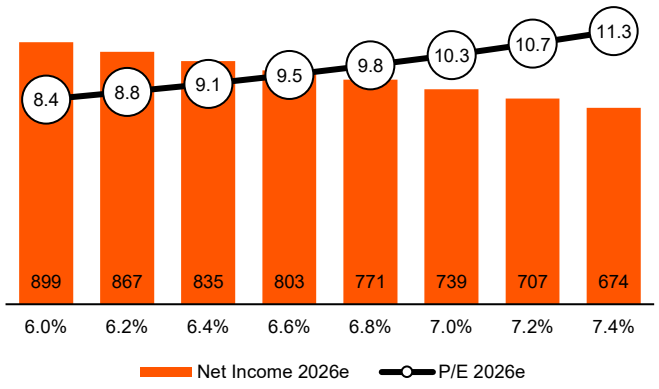
Source: Itaú BBA, Bloomberg and Company

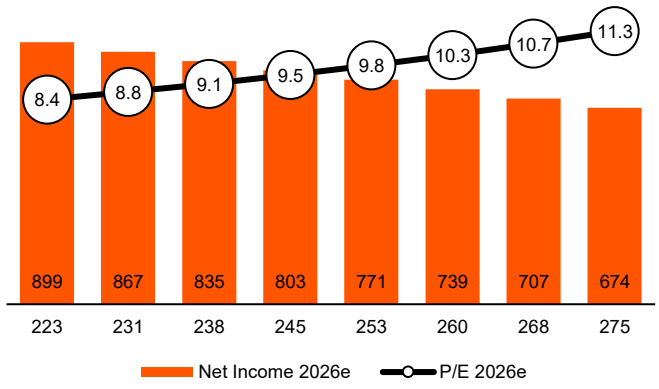
Assuming no positive operational offset, the maximum SG&A revision for FY26 would translate into a downside earnings revision of roughly BRL 100 million under a worst-case scenario. In this context, following post-results stock performance, when TTEN3 declined by nearly 10%, the company would be trading at a P/E of around 10.3x, up from 10.1x based on Bloomberg figures. Importantly, this multiple expansion reflects a conservative stress case rather than our base view. Below, we present a sensitivity analysis with more conservative and, in our view, more feasible scenarios, where earnings revisions are materially smaller. Under these assumptions, the implied P/E would remain stable (or even decline) compared to pre-4Q25 results levels, reinforcing our view that valuation downside appears limited, or that the stock price correction in the last trading sessions has already incorporated the conservative scenario.

Sensitivity of 3tentos P/E 26e to Logistic Expenses as % of Revenues



Source: Itaú BBA and Company

Sensitivity of 3tentos P/E 26e to Logistic Expenses per ton (Grains and Soybean Meal)



Source: Itaú BBA and Company

Assessing what is priced following Friday's negative performance. From a different angle, for the stock to trade at a less palatable 12.5x P/E, a level where we already sense some investors becoming less enthusiastic about the thesis, one would need to assume a ~10% YoY increase in unit freight costs, with no offset whatsoever from operational improvements supporting net income – an outcome we view as overly conservative given current fundamentals.

Despite higher uncertainty about SG&A expenses, we continue to like the 3tentos equity story, which remains our Top Pick. We have engaged in multiple interactions with the buy side over the past few days and see limited downside even in a worst-case scenario concerning EPS revisions. The negative stock performance observed on Friday seems to have already priced in this outcome, which is understandable given the rise in uncertainty and investors' preference for a more conservative stance at this stage. That said, we believe this theme should gradually de-risk as investors recalibrate their FY26 projections and as we gain more visibility on 3tentos' 1H26 results. From a valuation perspective, we already viewed the company as discounted for a name with such strong growth and quality attributes. Following the 4Q25 results, we expect the consensus multiple range to converge toward a slightly lower level, in our view. Even for more bearish investors, any P/E increase appears immaterial in terms of altering the long-term investment case or our preference for the stock, particularly against a backdrop of broader challenges currently affecting most stories across the agribusiness space.
